

# The Portable Aerosol System

## *To dispense sanitizers and disinfectants*

### **Aerosol - Air - Liquid . . . Choose your delivery method**

The 1 Gallon Portable Aerosol System puts you in control of output type. Select aerosol, liquid only or air only. The compressor driven system delivers aerosol disinfectants to all public areas and vehicles.

Unit is adjustable to give you a disinfectant spray from a heavy mist to a light fog. By treating the area with a fog type spray you can avoid any additional "wiping down" of the infected area. Easy to use and saves on the cost of Aerosol Cans.

**You can even remove your PAS from its case and away from air source for treatments.** The 9" extension model allows you to store your wand extension inside the case. The 18" extension model has convenient clips on top to store your wand.

Great for:

- Buses • Trains • Ambulances • Hospitals
- Elevators • School Rooms • Cruise Ships
- Nursing Homes • Bathrooms and Toilets
- Locker Rooms • Park Benches

- » 1 gallon useable
- » Disinfects and sanitizes more area in less time
- » Easy to use and clean
- » 12 ft. recoiling hose
- » 9" or 18" stainless steel extension and tip
- » Application flexibility
- » Self regulating compressor available in 110 and 220 (please specify)

*Shown above: PAS Unit with 18" Valve*
